SEO intro

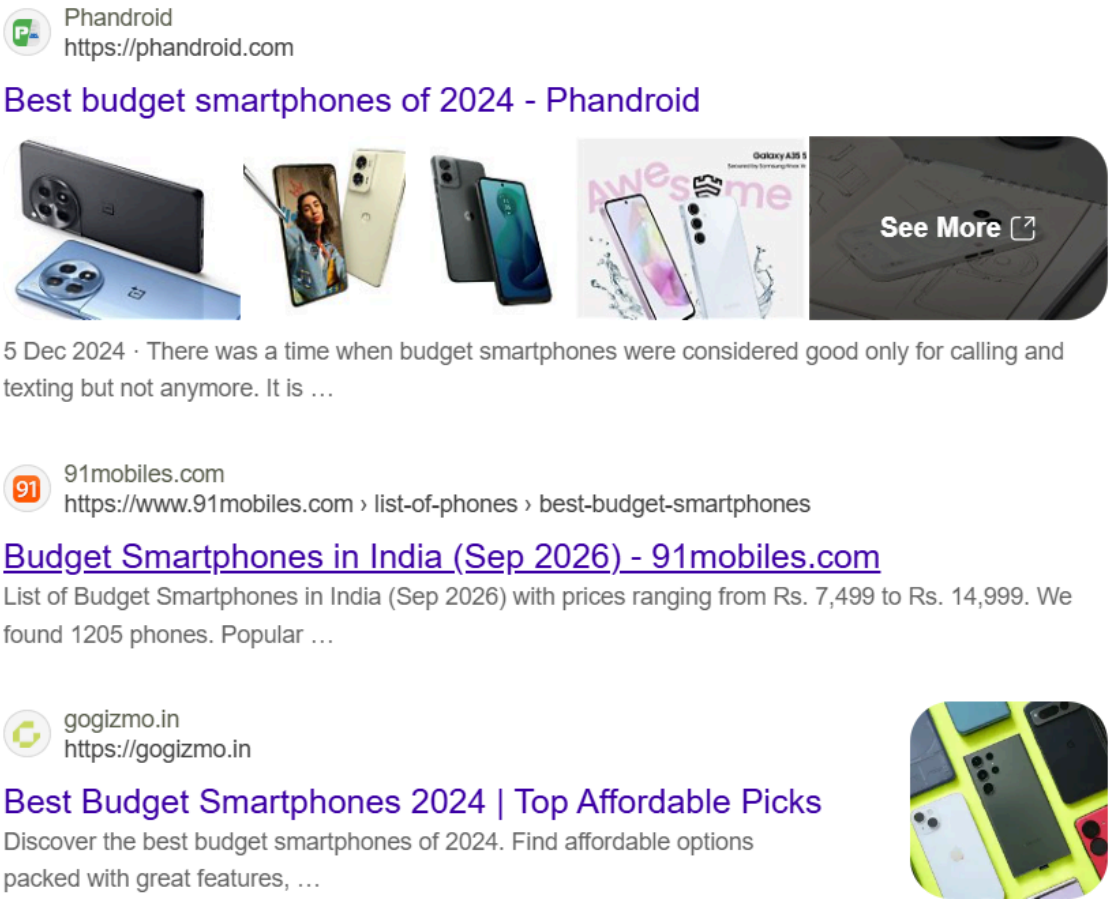

1. Open Google, Bing, and DuckDuckGo in your browser and search for 'best budget smartphones 2024'. Take screenshots of the first page of results for each search engine and note any differences in the top 3 results.

Screenshot 1 – Google Search Results
Search Query: "best budget smartphones 2024"
Observation: The first three visible results are organic search results because they do not contain an "Ad" or "Sponsored" label.

Screenshot 2 – DuckDuckGo
Search Query: "best budget smartphones 2024"
Observation: The first three visible results are organic search results because they do not contain an "Ad" or "Sponsored" label.

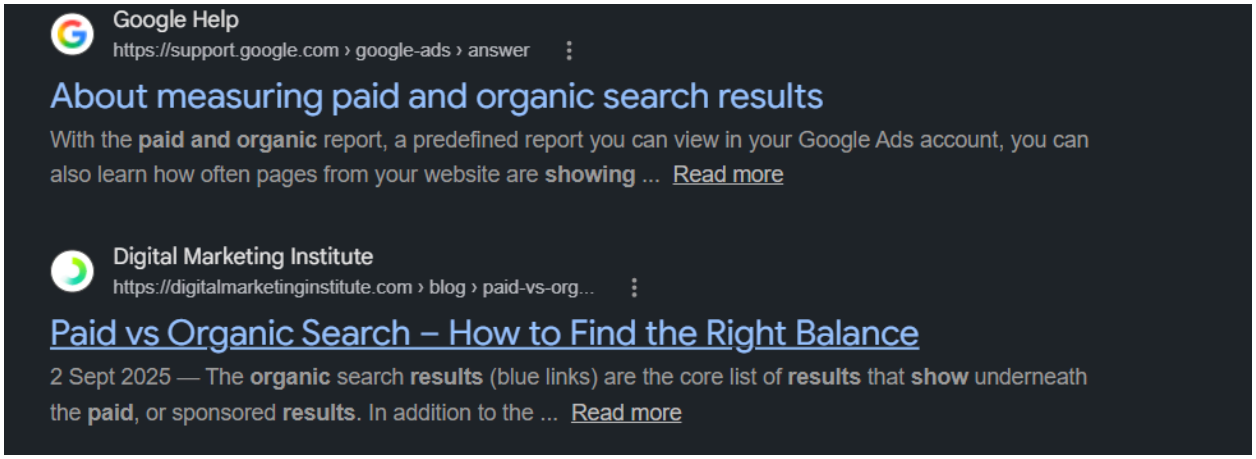

Screenshot 3 – bing
Search Query: "best budget smartphones 2024"
Observation: The first three visible results are organic search results because they do not contain an "Ad" or "Sponsored" label

2.Create a simple table in a Google Doc or Excel listing 5 popular search engines. For each, write one unique feature or reason why a user might choose it over Google.

No.	Search Engine	Unique Feature / Reason
1	Google	Provides highly relevant and comprehensive search results.

2	Bing	Integrates well with Microsoft products and services.
3	DuckDuckGo	Focuses strongly on user privacy.
4	Yahoo	Combines search with news, email and other online services.
5	Ecosia	Uses its advertising revenue to support tree-planting projects.

3. Write a short paragraph (4-5 lines) explaining in your own words the difference between organic results and paid results on a Google search results page. Include an example of each from a recent search you performed.

Organic results are webpages that appear naturally in Google search results because they are relevant to the user's search query. Paid results are advertisements for which businesses pay Google to appear prominently on the search page. Paid results usually have an **"Ad"** or **"Sponsored"** label. For example, while searching for **"best budget smartphones 2024,"** Amazon appeared as a paid result, while Phandroid and 91Mobiles appeared as organic results.

4.

Draw a flowchart (on paper or using any online tool) that shows the 3-stage process Google uses for search: crawling, indexing, and ranking. For each stage, write 1-2 lines describing what happens.

Answer:

Google Search Process

↓

Google discovers and visits webpages using automated crawlers.

↓

↓

Google analyzes the content and stores useful information in its search index.

↓

↓

Google ranks relevant pages and displays the most useful results for the user's query.

5.

Pick any trending topic (like IPL, new movie release, or a gadget launch) and search it on Google. Identify at least 2 organic results and 2 paid results from the first page, then explain how you recognized which was which.

I selected **"IPL"** as the trending topic and searched for it on Google.

Paid Results:

1. A sponsored cricket-related result marked with an **"Ad"** label.
2. Another sponsored result marked with an **"Ad"** or **"Sponsored"** label.

Organic Results:

1. An official cricket website or sports website appearing without an advertisement label.
2. A sports news or information website appearing without an advertisement label.
