Internal Linking

12.1

Question: Create a simple blog homepage (HTML only) with at least 3 article links. Make sure each article link uses descriptive anchor text instead of 'click here' or 'read more'.

Answer:

```
<!DOCTYPE html>
<html>
<head>
   <title>Future Technology Trends</title>
</head>
<body>

<h1>Future Technology Trends</h1>

<h2>Latest Articles</h2>

<ul>
   <li><a href="ai-trends.html">The Future of Artificial Intelligence</a></li>
   <li><a href="robotics.html">How Robotics Is Changing Industries</a></li>
   <li><a href="quantum-computing.html">Introduction to Quantum
Computing</a></li>
</ul>

</body>
</html>
```

Descriptive anchor text helps users and search engines understand the topic of the linked page.

12.2

Question: Draw a silo structure diagram for a food delivery app website (like Zomato), showing how the main categories (Home, Restaurants, Offers, Blog) and their subpages should be internally linked for SEO.

Answer:

SEO Purpose: The Home page links to the main categories, while each category links to its relevant subpages. This creates a clear hierarchy and helps search engines crawl and understand the website.

12.3

Question: Rewrite the anchor text for these 4 internal links on a Flipkart-style product page to optimize for relevant keywords: (1) 'See more', (2) 'Click here for reviews', (3) 'Go to similar products', (4) 'Read about returns'.

Answer:

No.	Original Anchor Text	Optimized Anchor Text
1	See more	View more smartphones in this category
2	Click here for reviews	Read customer reviews for this smartphone
3	Go to similar products	Explore similar smartphones
4	Read about returns	Check easy return policy

These anchor texts are descriptive, keyword-relevant, and clearly explain the destination of each internal link.

12.4

Question: Given a list of 6 internal links on a BookMyShow-style movie site, decide which 2 pages should receive the most link juice and explain why. Suggest how you would adjust the internal linking to support this.

Answer:

6 Internal Links:

Home
Movies
Upcoming Movies
Offers

Events
My Bookings

Pages to prioritize:

1. Movies

Main category page for movie-related searches.
Contains links to individual movie pages.
Can receive links from Home, Blog, Offers, and movie-related pages.

2. Home

Main entry point of the website.
Connects users to important website sections.
Important pages can link back to Home.

Internal Linking Adjustment:

Add links to the Movies page from Home, Blog, Offers, and relevant movie pages.
Use descriptive anchor text such as "Latest Bollywood Movies" and "Upcoming Movies."
Link important movie pages back to the main Movies category.
12.5

Question: Pick a topic cluster for a music streaming app (like Spotify), identify one pillar page and at least 3 cluster pages, and describe how you would link them together following the pillar-cluster model.

Answer:

Topic Cluster: Music Genres

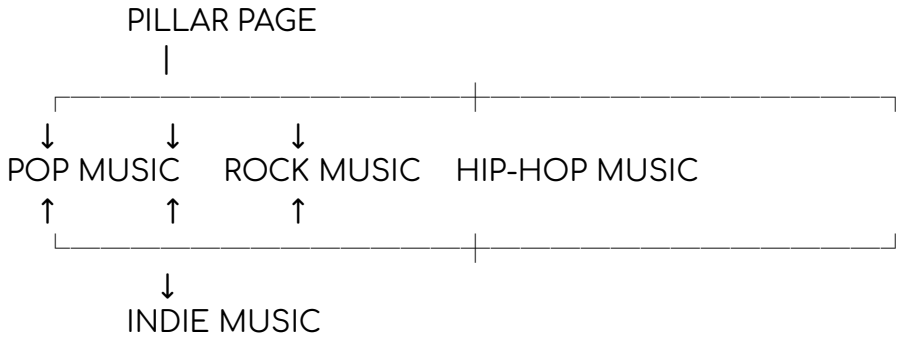
Pillar Page:
Complete Guide to Music Genres

Cluster Pages:

Pop Music – Songs, Artists & Playlists
Rock Music – Popular Songs & Artists
Hip-Hop Music – Songs, Artists & Playlists
Indie Music – Artists, Songs & Playlists

Linking Structure:

MUSIC GENRES



The pillar page links to all cluster pages using descriptive anchor text. Each cluster page links back to the pillar page, and related cluster pages can also link to each other when relevant. This helps search engines understand the relationship between the main topic and its supporting content.
