FAQ and HowTo Schema, Product and Review Schema

1. Add FAQ schema markup to a Zomato-style restaurant page (e.g., 'Do you offer home delivery?', 'What are your opening hours?') using JSON-LD, and validate it using Google's Rich Results Test tool.

Answer:

```
<!DOCTYPE html>
<html>
<head>
   <title>Ahmedabad Restaurant - FAQ</title>

   <script type="application/ld+json">
   {
    "@context": "https://schema.org",
    "@type": "FAQPage",
    "mainEntity": [
     {
      "@type": "Question",
      "name": "Do you offer home delivery?",
      "acceptedAnswer": {
       "@type": "Answer",
       "text": "Yes, we offer home delivery within selected areas of Ahmedabad."
      }
     },
     {
      "@type": "Question",
      "name": "What are your opening hours?",
      "acceptedAnswer": {
       "@type": "Answer",
       "text": "Our restaurant is open daily from 11:00 AM to 11:00 PM."
      }
     },
     {
      "@type": "Question",
      "name": "Do you accept online orders?",
      "acceptedAnswer": {
       "@type": "Answer",
       "text": "Yes, customers can place food orders online."
      }
     }
```

```
    ]
  }
  </script>
</head>

<body>

  <h1>Ahmedabad Restaurant</h1>

  <h2>Frequently Asked Questions</h2>

  <h3>Do you offer home delivery?</h3>
  <p>Yes, we offer home delivery within selected areas of Ahmedabad.</p>

  <h3>What are your opening hours?</h3>
  <p>Our restaurant is open daily from 11:00 AM to 11:00 PM.</p>

  <h3>Do you accept online orders?</h3>
  <p>Yes, customers can place food orders online.</p>

</body>
</html>
```

2. Implement HowTo schema for a 'How to book IPL tickets on BookMyShow' guide — include at least 3 steps and use JSON-LD format.

Answer:

```
<!DOCTYPE html>
<html>
<head>
  <title>How to Book IPL Tickets on BookMyShow</title>

  <script type="application/ld+json">
  {
    "@context": "https://schema.org",
    "@type": "HowTo",
    "name": "How to Book IPL Tickets on BookMyShow",
    "step": [
      {
        "@type": "HowToStep",
```

```
        "name": "Open BookMyShow",
        "text": "Open the BookMyShow website or mobile application."
      },
      {
        "@type": "HowToStep",
        "name": "Select IPL Match",
        "text": "Search for the IPL match and select the desired match and venue."
      },
      {
        "@type": "HowToStep",
        "name": "Choose Seats and Pay",
        "text": "Select available seats, enter the required details, and complete the payment."
      }
    ]
  }
  </script>
</head>

<body>

  <h1>How to Book IPL Tickets on BookMyShow</h1>

  <h2>Step 1: Open BookMyShow</h2>
  <p>Open the BookMyShow website or mobile application.</p>

  <h2>Step 2: Select IPL Match</h2>
  <p>Search for the IPL match and select your preferred match and venue.</p>

  <h2>Step 3: Choose Seats and Pay</h2>
  <p>Select available seats and complete the payment.</p>

</body>
</html>
```

3. Use ChatGPT or any AI schema generator to create Product schema markup for a Flipkart-style smartphone product page, including name, brand, image, and price.

Answer:

```
<!DOCTYPE html>
<html>
<head>
   <title>Samsung Galaxy A55 5G</title>

   <script type="application/ld+json">
   {
     "@context": "https://schema.org",
     "@type": "Product",
     "name": "Samsung Galaxy A55 5G",
     "brand": {
       "@type": "Brand",
       "name": "Samsung"
     },
     "image": "https://example.com/images/samsung-galaxy-a55.jpg",
     "offers": {
       "@type": "Offer",
       "price": "34999",
       "priceCurrency": "INR"
     }
   }
   </script>
</head>

<body>

   <h1>Samsung Galaxy A55 5G</h1>

   <p>Brand: Samsung</p>
   <p>Price: ₹34,999</p>

   <img src="samsung-galaxy-a55.jpg"
        alt="Samsung Galaxy A55 5G smartphone">

</body>
</html>
```

The Schema.org `Product` type supports properties such as `name`, `image`, `brand`, and

4. Add Review and AggregateRating schema to a Myntra-style sneaker product page, showing 4.3 stars from 120 reviews, and include at least one sample review in the markup.

Answer:

```
<!DOCTYPE html>
<html>
<head>
   <title>Nike Air Max Running Shoes</title>

   <script type="application/ld+json">
   {
     "@context": "https://schema.org",
     "@type": "Product",

     "name": "Nike Air Max Running Shoes",

     "brand": {
       "@type": "Brand",
       "name": "Nike"
     },

     "image": "https://example.com/images/nike-air-max.jpg",

     "aggregateRating": {
       "@type": "AggregateRating",
       "ratingValue": "4.3",
       "bestRating": "5",
       "reviewCount": "120"
     },

     "review": {
       "@type": "Review",
       "author": {
         "@type": "Person",
         "name": "Rahul"
       },
       "reviewRating": {
         "@type": "Rating",
         "ratingValue": "5",
```

```
        "bestRating": "5"
      },
      "reviewBody": "The shoes are comfortable and perfect for daily running."
    }
  }
  </script>
</head>

<body>

  <h1>Nike Air Max Running Shoes</h1>

  <p>Rating: 4.3 out of 5 based on 120 reviews</p>

  <p>
    Customer Review: The shoes are comfortable and perfect
    for daily running.
  </p>

</body>
</html>
```

`AggregateRating` represents an overall rating based on a collection of reviews or ratings, while `Review` represents an individual review.

---

5. Extend your Product schema for a Swiggy-style food item to include Offer, Price, and Availability properties so Google can display special deals in search results.

Answer:

```
<!DOCTYPE html>
<html>
<head>
  <title>Paneer Butter Masala - Food Delivery</title>

  <script type="application/ld+json">
  {
    "@context": "https://schema.org",
    "@type": "Product",
```

```
    "name": "Paneer Butter Masala",

    "image": "https://example.com/images/paneer-butter-masala.jpg",

    "description": "Delicious paneer butter masala available for online food delivery.",

    "offers": {
      "@type": "Offer",
      "price": "249",
      "priceCurrency": "INR",
      "availability": "https://schema.org/InStock",
      "priceValidUntil": "2026-10-31"
    }
  }
  </script>
</head>

<body>

  <h1>Paneer Butter Masala</h1>

  <p>Special Offer Price: ₹249</p>

  <p>Availability: In Stock</p>

</body>
</html>
```

The `Offer` type supports properties such as `price`, `priceCurrency`, and `availability`; `availability` can indicate states such as `InStock` or `OutOfStock`.
