E-commerce SEO Basics

Q-1.

Pick a product page from an Indian e-commerce site you use (like Flipkart or Myntra) and list 5 SEO elements present on that page (such as title tag, meta description, product schema, reviews, internal links, etc.).

Ans:

Example E-commerce Site: Flipkart
Product: Fastrack Stunners X Analog Watch for Men

1. Title Tag:

Fastrack Stunners X Analog Watch - For Men - Buy Fastrack Stunners X Analog Watch - For Men 38163NL01,NU38163NL01 Online at Best Prices in India | Flipkart.com

2. Meta Description:

Buy Fastrack Stunners X Analog Watch for Men online at the best price in India. Enjoy great discounts, genuine products, replacement guarantee, free shipping, and cash on delivery.

3. Product Schema:

Product schema provides search engines with product details such as name, brand, price, and availability.

4. Rating and Reviews:

The product page displays customer ratings and reviews, helping customers understand product quality and make purchasing decisions.

5. Internal Links:

Links to related watches, other products, and brand categories help users explore more products and help search engines discover related pages.

Q-2.

Write optimized title and meta description tags for a new Zomato-style restaurant product page selling 'Paneer Tikka Pizza', making sure to include relevant keywords and a call to action.

Ans:

Title Tag:

<title>Paneer Tikka Pizza Online | Order Delicious Pizza</title>

Meta Description:

<meta name="description" content="Order delicious Paneer Tikka Pizza online with spicy paneer, fresh toppings and cheesy goodness. Order now and get your favorite pizza delivered today!">

Target Keywords:

- Paneer Tikka Pizza
- Paneer Pizza
- Order Pizza Online
- Pizza Delivery

Q-3.

Create a sample HTML snippet for a category page (like 'Men's Sneakers' on Myntra) that includes an H1, a short SEO-friendly intro paragraph, and at least 3 internal links to related categories.

Ans:

```
<!DOCTYPE html>
<html lang="en">
<head>
   <title>Men's Sneakers Online | Stylish Sneakers</title>
   <meta name="description" content="Shop men's sneakers online in stylish designs for casual, sports and everyday wear. Explore the latest sneaker collections.">
</head>
<body>

   <h1>Men's Sneakers</h1>

   <p>
      Explore our collection of men's sneakers featuring stylish,
      comfortable and trendy designs for casual, sports and everyday wear.
      Find the perfect pair for your style.
   </p>

   <h2>Explore Related Categories</h2>

   <ul>
```

```
    <li><a href="/mens-running-shoes">Men's Running Shoes</a></li>
    <li><a href="/mens-casual-shoes">Men's Casual Shoes</a></li>
    <li><a href="/mens-sports-shoes">Men's Sports Shoes</a></li>
  </ul>

</body>
</html>
```

Q-4.

Explain with a short example how faceted navigation (like filters for brand, price, color on Flipkart) can create SEO problems such as duplicate content or crawl traps.

Ans:

Faceted navigation allows users to filter products by brand, price, color, size, and rating.

Example:

A website may have the following category URL:

`/mens-shoes`

After applying filters, it may generate these URLs:

- `/mens-shoes?brand=nike`
- `/mens-shoes?brand=nike&color=black`
- `/mens-shoes?brand=nike&color=black&size=9`

SEO Problems:

1. **Duplicate Content:** Different URLs may show nearly identical products and descriptions.
2. **Crawl Traps:** Search engine bots may crawl thousands of filter combinations.
3. **Crawl Budget Waste:** Crawlers may spend time on low-value URLs instead of important pages.
4. **Indexing Issues:** Search engines may struggle to identify the preferred page.

Q-5.

Suggest two practical solutions to avoid SEO issues caused by faceted navigation in an e-commerce site, and briefly describe how each solution works.

Ans:

1. Use Canonical Tags and Noindex

A canonical tag tells search engines which URL is the preferred version when similar pages exist. A `noindex` directive can be used for filter pages that should not appear in search results.

Example:

<link rel="canonical" href="https://www.example.com/mens-shoes">

This identifies the main men's shoes category page as the preferred URL.

2. Control Crawling with Robots.txt

Use `robots.txt` to restrict crawling of selected filter URLs that do not need to be crawled.

Example:

User-agent: *
Disallow: /*?color=
Disallow: /*?size=
