2). What is HTTPS/SSL Update?

HTTPS (HyperText Transfer Protocol Secure) - The secure version of HTTP.
SSL(secure sockets layer) - The technology used to secure connections.

HTTPS uses SSL/TLS certificates to encrypt the data exchanged between a user's browser and a website. This encryption protects sensitive information, such as usernames, passwords, and payment details, from unauthorized access. An HTTPS/SSL update involves installing, renewing, or upgrading the SSL certificate and security settings to ensure secure communication, improve website security, and maintain compatibility with modern web browsers.
