Digital Marketing overview

1. Growth Activities for Food Delivery Giants (Zomato & Swiggy)

To attract new users and maintain market dominance, brands like Zomato and Swiggy leverage high-frequency engagement tactics.

- **Moment Marketing & Social Humour:** These apps use trending topics and witty content on platforms like X (Twitter) and Instagram. This builds brand relatability, encouraging non-users to download the app just to be part of the "cultural conversation."
- **Hyper-Personalised Push Notifications:** By sending notifications triggered by time (e.g., lunch hour) or external factors (e.g., rain), they create an immediate need. This helps the app grow by increasing the "Open Rate" and converting passive browsing into orders.
- **Performance Marketing (Search & Display Ads):** Targeting keywords like "food delivery near me" ensures they appear at the top of Google results. This captures high-intent users who are ready to purchase but haven't chosen a platform yet.
- **Influencer & Food Blogger Collaborations:** Partnering with regional food vloggers allows them to tap into niche audiences. Trusted reviews from local influencers build credibility for new users in Tier 2 or Tier 3 cities.
- **Referral Programs:** Offering "Refer a Friend" discounts incentivizes existing users to act as brand ambassadors. This lowers the Customer Acquisition Cost (CAC) while rapidly expanding the user base through word-of-mouth.

2. Comparative Analysis of Digital Marketing Channels

Marketing Channel	Main Advantage	Possible Drawback
Instagram Sponsored Ads	High visual impact and precise demographic targeting (age, interests).	Ad fatigue can set in quickly, requiring constant creative refreshes.
YouTube Influencer Marketing	Builds deep trust and allows for long-form demonstration of app features.	Difficult to track direct attribution and high upfront costs for top-tier talent.
Google Search Ads (SEM)	Captures users at the exact moment of intent (high conversion rate).	Extremely competitive bidding can lead to a very high Cost Per Click (CPC).

3. Feature Promotion Plan: Paytm "Shared Bills"

To promote a new "Shared Bill Splitter" feature on Paytm, the following multi-channel strategy would be implemented:

1. **In-App Interstitials:** Display a "Split your bill" pop-up immediately after a successful transaction at a restaurant or utility provider.
2. **Social Media How-To Reels:** Create short, relatable videos showing a group of friends avoiding "awkward money talk" by using the new feature.
3. **Targeted Email Campaign:** Send personalized emails to frequent "P2P" (Peer-to-Peer) transfer users highlighting the time-saving benefits.
4. **Cashback Incentives:** Offer a flat ₹50 cashback for the first three "Split Bill" transactions completed through the app.
5. **WhatsApp Marketing:** Utilize Paytm's verified WhatsApp channel to send a direct link to the feature for users who frequently pay group bills.

4. Five Step Launch Plan for "Pulse Playlists" (Spotify-like Feature)

This plan is designed to create a "viral loop" and ensure high adoption of a new AI-driven playlist feature.

- **Step 1: The Teaser Phase (The "Coming Soon" Vibe):** Launch a 48-hour social media campaign using "audio-only" snippets. Ask users to guess their "mood" based on a soundscape, creating mystery and anticipation.
- **Step 2: Influencer "Vibe" Takeover:** Partner with 10 diverse influencers (from gym junkies to lo-fi students) to share their "Pulse Playlist" on their stories. This provides social proof and demonstrates the feature's versatility.
- **Step 3: Gamified In-App Discovery:** On launch day, place a "Unlock Your Pulse" card on the home screen. Users must interact with a 30-second mood-slider to generate their first playlist, making the experience interactive rather than passive.
- **Step 4: Shareable "Mood Cards":** Ensure the generated playlists have highly aesthetic, shareable graphics (similar to Spotify Wrapped). Each card should include a QR code that takes friends directly to the feature.
- **Step 5: Retention Retargeting:** One week after the launch, send push notifications to users who haven't tried it yet, using copy like: "Your Friday night has a sound. Discover your Pulse."
