User Engagement

1. Instagram – 3 Ways It Keeps Users Engaged

App: Instagram

1. **Personalized Recommendations** – Instagram recommends Reels, posts, and accounts based on the user's interests and previous activity.
2. **Push Notifications** – Notifications about likes, comments, messages, and new followers encourage users to return to the app.
3. **Stories & Reels** – Short, regularly updated content encourages users to keep scrolling and discover new content.

---

2. Instagram-Style Story Poll

Poll Question:
What would you order for dinner tonight?

Option 1: Burger
Option 2: Pizza

How I would collect and display votes:

- Add the poll sticker to an Instagram-style story.
- Each user selects one of the two options, and the system automatically records the vote.
- After voting, display the percentage and total number of votes for each option, such as **Burger: 45% (450 votes)** and **Pizza: 55% (550 votes)**.
- At the end of the poll, share the final results in another story.

---

3. Push Notification for a Food Delivery App

Sample Notification:

We Miss You! Get 30% OFF Your Next Order
It's been 3 days! Come back and enjoy your favorite meals with a special offer. **Order now!**

---

4. Flipkart Product Page – 2 Engagement Features

1. Wishlist
The wishlist allows users to save products they are interested in for later. Users can return to the app to check price changes, offers, or availability, increasing repeat visits and engagement.

2. Ratings & Reviews
Ratings and customer reviews give users more information before purchasing. Users may spend more time reading reviews, comparing experiences, and checking product details before making a decision.

5. Three Creative Ideas for a Music Streaming App

1. Collaborative Playlists
Allow friends to create and edit one playlist together. This encourages users to invite friends and regularly return to update the playlist.

2. Personalized Music Challenges
Create weekly challenges such as “Listen to 5 new artists” or “Discover 10 songs from a new genre.” Users can earn badges or points for completing them.

3. Music Mood Rooms
Create interactive music rooms based on moods such as **Happy, Relax, Workout, Party, or Focus**. Users can listen together, react to songs, and share the room with friends.
