Search Engine Basics

1. Search: “Best Pizza Places in Ahmedabad”

After checking current search results, the following are examples of prominent results for this query:

Rank	Website	Result Type
1	**Tripadvisor** – Best Pizza in Ahmedabad	Organic
2	**Zomato** – Pizza Restaurants in Ahmedabad	Organic
3	**Swiggy** – Best Pizza Restaurants in Ahmedabad	Organic

Tripadvisor currently has a dedicated Ahmedabad pizza listing, while Zomato and Swiggy also have Ahmedabad-specific pizza pages.

Note: Google results can change based on location, device, personalization, and time. Therefore, the exact top 3 may differ when you perform the search yourself.

---

2. Five Keywords for Finding Zomato on Google

Website/App: Zomato

Possible Google search keywords are:

1. **Zomato**
2. **Zomato food delivery**
3. **Zomato restaurants near me**
4. **Order food online Zomato**
5. **Zomato restaurant offers**

These keywords cover **brand searches, food delivery searches, local searches, and offer-related searches**.

---

3. Search: “Buy Wireless Headphones Online”

A first-page Google search can contain a mixture of shopping websites, review websites, and advertisements. The exact results vary by location and time, so this is a **sample assignment analysis**, not a fixed Google result count.

Result Type	Approx. Count	Examples
E-commerce Sites	5	Amazon, Flipkart, Croma, Reliance Digital, official brand stores
Blogs / Review Sites	3	RTINGS, TechRadar, Tom's Guide
Ads / Sponsored Results	2	Shopping or retailer advertisements

For example, current headphone search results include review content from RTINGS and TechRadar, which are review/information sites rather than e-commerce stores.

Conclusion: Commercial searches such as “buy wireless headphones online” usually contain a strong mix of **e-commerce results and paid shopping advertisements**, while review websites help users compare products before purchasing.

---

4. Search Engine vs Web Browser

Search Engine

A **search engine** is an online service that helps users find websites, information, images, videos, and other content on the internet.

Examples:

- Google Search
- Bing

Web Browser

A **web browser** is software used to open websites and interact with online content.

Examples:

- Google Chrome

- Microsoft Edge

Simple Difference

Search Engine = Finds information.
Web Browser = Opens and displays websites.

Example: I can open **Google Search** using **Google Chrome**, search for “best pizza in Ahmedabad,” and then open the websites shown in the results.
