Question:
Use your phone's Google Lens or Pinterest Lens to visually search for any item in your room (e.g., a sneaker, book, or snack). Take a screenshot of the visual search results and describe how the search engine interprets your image to suggest products or information.

Answer:
Google Lens analyzes the image by identifying visual features such as the **shape, color, design, text, and overall appearance** of the object. For example, if I scan a sneaker, Google Lens can recognize it as footwear and show similar products, brands, prices, and related information. This helps users find products or information even when they do not know the exact name of the item.

3.4

Question:
Try a voice search on your phone using Google Assistant or Siri for 'best pizza near me'. Note the exact phrase you spoke and compare the results with a typed search for the same query. List any differences in the results or the way information is displayed.

Answer:

Exact voice search phrase: "Best pizza near me"

Voice Search	Typed Search
Uses natural conversational language	Uses typed keywords
Shows nearby pizza restaurants	Shows restaurants, websites, and maps

Can provide direct recommendations	Usually provides a list of search results
May show ratings, distance, and opening hours	Similar information may require opening results

Voice search can provide more direct and local results because Google understands the user's search intent and location.

Question:
Search for 'IPL score' on Google and observe if you get the answer directly on the search page without clicking any link. Explain what a Zero-click search is, and give 2 more examples of queries that show Zero-click results.

Answer:
When searching **"IPL score"**, Google can display the latest IPL match score and match information directly on the search results page without requiring the user to open another website.

A **Zero-click search** is a search where the user gets the required information directly on the Google search results page without clicking an external website.

Two examples:

1. **"Weather in Ahmedabad"** – Google displays the weather directly.
2. **"Capital of India"** – Google displays the answer directly.

Picture: Attach a screenshot of the Google search results for **"IPL score"** showing the score directly on the page.
