Site Audit with AI Tools

Q-1. Use an AI-powered SEO tool like Semrush or Ahrefs to perform a basic site audit on your favorite local restaurant's website and list 5 technical SEO issues the tool detects.

Ans:

Website selected: Ramanam.in

1. **Missing Meta Descriptions:** Some pages may not have unique meta descriptions.
2. **Broken Links:** Some internal or external links may lead to error pages.
3. **Slow Page Loading:** Large images or unused scripts may slow down the website.
4. **Missing Image Alt Text:** Some images may not have descriptive alt attributes.
5. **Mobile Usability Issues:** Some pages may not display properly on mobile devices.

Note: These are sample issues, not verified audit results. Confirm them using Semrush or Ahrefs before submitting.

Q-2. Download and install Screaming Frog SEO Spider (free version), crawl the homepage of a popular e-commerce site (like myntra.com), and export the list of URLs found into a CSV file.

Ans:

CSV file link provided in the assignment:

https://shorturl.at/KkkB3

Q-3. From your Screaming Frog crawl results, identify and prioritize three types of issues that would most impact search rankings for an online shopping site.

Ans:

1. **Broken Links (404 Errors):** Broken links create a poor user experience and prevent search engines from accessing pages. Fix or redirect broken URLs.
2. **Duplicate or Missing Title Tags:** Title tags help search engines understand page content. Add unique, descriptive titles to important pages.
3. **Missing or Duplicate Meta Descriptions:** These can reduce the attractiveness of search results. Write unique, relevant meta descriptions for important pages.

Q-4. Generate a short audit report (max 1 page) summarizing the main SEO issues found for a music streaming site (like Spotify or Gaana), and suggest one fix for each issue.

Ans:

SEO Audit Report – Music Streaming Website

SEO Issue	Impact	Suggested Fix
Missing Meta Description	Search engines may not get a proper page description, reducing search-result attractiveness.	Add a unique 120–160 character meta description.
Multiple H1 Tags	Multiple H1 tags can make the main topic less clear.	Use one clear and relevant H1 tag.
Missing Image Alt Attributes	Search engines have less information about images, and accessibility is reduced.	Add descriptive alt text to important images.
No Schema.org Structured Data	Search engines may have less structured information about the page.	Add relevant Schema.org structured data where appropriate.
Large Page Size / Performance	Large files can increase loading time and affect user experience.	Reduce unused JavaScript/CSS and optimize page resources.

Q-5. Use ChatGPT or another AI tool to analyze a sample web server log file and identify crawl errors or unusual bot activity. Paste the AI's summary and explain if you agree with its findings.

Ans:

AI Summary – Web Server Log Analysis

- The log shows normal crawling activity from Googlebot and Bingbot, with most requests returning **200 OK**.
- Googlebot received a **404 error** when accessing `/products/missing-item`, indicating a crawl error.
- A regular browser user agent requested `/wp-admin/`, `/xmlrpc.php`, and `/admin`. All three returned 404, which may indicate automated scanning or probing rather than normal browsin
