SEO Keyword Strategy & Search Intent Analysis

Practicals on Keyword Research, LSI Identification, Intent Classification, and Query Modifiers.

Task 1: Keyword Classification for a Daily-Use App

Selected App: Zomato (Food Delivery & Restaurant Discovery)

Short-Tail Keywords

High search volume, broad intent, typically 1–2 words:

- Zomato (Brand navigational keyword)
- Food delivery (Broad category keyword)
- Restaurants (General discovery keyword)
- Order food (High-level transactional keyword)
- Online biryani (Popular high-volume food query)

Long-Tail Keywords

Lower search volume, specific user intent, typically 3+ words:

- **Best food delivery app in Mumbai** (Location-specific commercial intent)
- **Late night midnight cake delivery near me** (Urgent local transactional intent)
- **How to apply Zomato Gold coupon code** (Informational user query)
- **Pure veg North Indian restaurant delivery online** (Niche requirement query)
- **Track live food delivery order Zomato** (Feature-specific search)

Task 2: LSI Keywords for Flipkart (Mobile Phones)

Seed Keyword: mobile phones

Latent Semantic Indexing (LSI) keywords help search engines understand context without relying strictly on exact keyword repetition. Below are 5 LSI keywords that reinforce page relevancy for Flipkart's mobile category:

1. **Smartphone deals and offers** — Connects search intent with discounts and promotion pages.
2. **Latest Android phones price list** — Capitalizes on operating system specificity and research intent.
3. **5G mobile under 20000** — Target key product specs (connectivity) and popular consumer budget brackets.
4. **Battery life and RAM specs** — Captures technical feature research closely linked to purchase evaluations.
5. **Exchange offer on old phones** — Contextually ties to trade-in mechanisms common in e-commerce purchasing decisions.

Task 3: Search Query Intent Classification

Understanding user intent enables accurate page targeting, content mapping, and conversion funnel optimization.

Search Query	Intent Classification	Justification & User Context
best budget laptops 2024	Commercial	The user is actively researching and comparing options prior to making a purchasing decision.
buy iPhone 14 online	Transactional	The user displays explicit conversion intent and is searching for a direct purchase portal or product listing.
Spotify login	Navigational	The user wants to reach a specific destination website or account portal.

Search Query	Intent Classification	Justification & User Context
how to use Paytm UPI	Informational	The user is seeking instructional knowledge, step-by-step guidance, or a tutorial.
Myntra vs Ajio	Commercial	The user is conducting comparative research between two competitor platforms to decide where to shop.

Task 4: Food Delivery Scenario & Query Modifiers

Scenario: Late-night weekend dinner planning for a group of friends.

Query 1: best pizza delivery near me

- **Intent Modifiers:** best (Quality), near me (Hyper-local geographic context)
- **User Search Intent:** The user is seeking highly rated local pizza establishments in immediate physical proximity that are currently accepting and fulfilling delivery orders.

Query 2: Zomato vs Swiggy delivery fee comparison

- **Intent Modifiers:** vs (Comparative consideration)
- **User Search Intent:** The user is evaluating cost differences, peak surge charges, or subscription benefits between two dominant service aggregators to determine which platform offers lower total pricing.

Query 3: 24 hour open food delivery fast delivery

- **Intent Modifiers:** 24 hour open (Availability constraint), fast (Speed requirement)
- **User Search Intent:** The user has an immediate, time-sensitive need at an off-peak hour and prioritizes operating status and minimal turn-around time over price or brand preference.
